WELCOME

Are you interested in building your own Web pages? This site introduces you to the basic HTML concepts and methods for creating your own Web content. It will guide you through the steps in creating Web pages with HTML and will show you how things work. All you have to do is go through the modules and discover just how easy it is to get up to speed. The source of the content for this site is from the LMC COMSC-30 text book "Simplified Creating Web Pages with HTML by Sherry Williard Kinkoph"

What is a Web Site?

A Web site is a collection of linked Web pages stored on a Web Server. Most Web sites have a home page that describes the information located on the Web site and provides a place where people can start their exploration of the Web site. The pages of a good Web site are intuitively organized and have a common theme.

What are the Parts of a Web Page?

You can communicate your message on the Web in a variety of ways. The following are some of the common elements that appear on Web page.

My Computer 75%
