19 <P>Steps in Building a Web site:</P>
20 <OL TYPE="A">
21 <LI>Organize your ideas</LI>
22 <LI>Gather your content</LI>
23 <LI>Define your audience</LI>
24 <LI>Host your finished web site</LI>
25 </OL>
26
27 <P>1. Organize Your Ideas</P>
28 <P>Build your Web site on paper before you start building it in a
    HTML Editor (i.e. Adobe Dreamweaver &reg; ). Sketching out a Web
    site map, with rectangles representing Web pages and arrows
    representing links, can help you to visualize the size and score of
    your project. Use sticky notes if you want to move pages around as
    you plan your Web site.</P>
29
30 <P>2. Gather Your Content</P>
31 <P>Before you start building your Web site, gather all of the
    elements that you want to use. Gathering all of your materials
    together in the beginning makes it easier for you to organize your
    Web site once you start building it. Below are the following
    content that you might need to gather:</P>
32 <UL>
33 <LI>Text</LI>
34 <LI>Images</LI>
35 <LI>Hyperlinks</LI>
36 <LI>Tables</LI>
37 <LI>Forms</LI>
38 <LI>Frames</LI>
39 </UL>

```

```
41 <P>3. Define Your Audience</P>
42 <PRE>Identifying your target audience can help you to decide what
43 kind of content to offer
44 on your Web site. It is important to know whether visitors of your
45 site are using the latest
46 Web browser technology and how fast they can view advanced
47 features, such as multimedia</PRE>
48
49
50 <P>4. Host Your Finished Web Site</P>
51 <BLOCKQUOTE>To make your finished Web site accessible on the Web,
52 you need to store, or host, it on a Web server. Most people have
53 their Web sites hosted on a Web server at a commercial Internet
54 service provider (ISP) or at their company or
55 university.</BLOCKQUOTE>
